

Teach in Korea Cover Letter

To Bridge Job Kr

Hello, my name is Paige Han, and I am very interested in being placed as a Science teacher in Korea. I was born in 1992 , and lived there until the age of thirteen. In 2005, I relocated to Australia (Adelaide) as a Grade 7 student and have since lived and been educated in Australia. Although Korean remains my heart language, I am a near-native English speaker with a natural accent, which will be evident during the interview process.

For my tertiary education, I relocated to Sydney and completed a Bachelor of Science at the University of New South Wales. Following this, I pursued additional qualifications in Graphic design, Cookery and line with my interests. Professionally, I have worked as a kitchen hand, disability support worker and swimming instructor. During my university studies, I also gained experience as a Mathematics tutor.

In my personal time, I enjoy cooking, watching Netflix, and spending time with my dog.

Recently, I have been seeking full-time employment and developed a strong interest in teaching elementary students at an international school in Korea. I am an energetic individual who enjoys working with children and engaging in tasks that involve clear objectives and progression. I believe supporting Korean Elementary students in developing their interests in Science and preparing them for future academic stages would be both meaningful and rewarding.

I believe I would be a strong candidate for teaching position at an international school in Korea, as I have prior experience teaching Mathematics and Swimming in English to young students, along with a solid understanding of Korean culture. Additionally, I have a strong appreciation for Korean cuisine.

The earliest date I would be able to arrive in Korea is the last week of June 2026. With regard to visa status, I intend to apply for an (rather than an). Please feel free to contact me should you require any further information or wish to arrange an interview.

Kind Regards

Paige Han
